Functional Specification Document

Module: Experience API

DOCUMENT REVISION HISTORY

Version	Date	Revised by	Description
0.1	14/06/2024	Pratheek, Avaneesh, Sushmitha and Mohini	Initial draft
0.2	03/07/2024	Pratheek, Avaneesh and Mohini	Get ETB Customer Account Data, Request parameter for EKYC Redirection API.
0.3	04/07/2024	Pratheek and Sushmitha	Login Mobile Change API, Login Mobile Change Verification OTP API
0.4	15/07/2024	Pratheek, Nishanth and Avaneesh	VKYC status and VKYC initiation.
0.5	18/07/2024	Pratheek and Mohini	EKYC Status Inquire API
0.6	25/07/2024	Pratheek and Sushmitha	Email Generation API and Email Verification.
0.7	02/08/2024	Pratheek and Avaneesh	SA Creation API
0.8	19/08/2024	Pratheek, Avaneesh and Sushmitha.	Master API, State API
0.9	24/02/2025	Mohini	ETB Account Opening API

1.0	06/03/2025	Abhishek and Mohini	Re-ekyc
1.1	20/03/2025	Abhishek	Generate OTP API request changes
1.2	15/05/2025	Deepthi	Get Bulk Account status
1.3	19/06/2025	Deepthi	VKYC status API removal and Re-EKYC status enquiry response changes
1.4	10/09/2025	Abhishek Bharadwaj	OBRH Access token and Data Screening API integration, get-etb-account-details response changes
1.5	19/09/2025	Abhishek Bharadwaj	EKYC Engine API integration for EKYC redirection and status enquiry with new v2 endpoints

Generate OTP API

Overview

The OTP Generation Service, including the integration of additional request data such as Aadhaar Reference Number and return PAN response status. This service will validate PAN details with NSDL and generate an OTP for user authentication.

Ex API	HDFC API
Experince login generation /api/v3/customer_otpsevice/generate-registration-otp	OTP Generation https://10.226.163.41:5142/CC_IVR/ProxyService/PS_OTPGeneration_SMSService PAN Validation https://10.226.163.44:5142/Pan_Validation/PR_PAN_VALIDATION_V2

- In the OTP Generation API, OTP is generated and shared to the inputted mobile number
- There are a total number of 3 attempts with a cool-off period of 10 minutes.

Header Parameters

Field	Mandatory	Data Type	Description	Comment
channel	Y	varchar (10)	Field to identify a partner. Will be shared during access of API	Ex: SETU
transactionId	Y	varchar(40)	unique number for traceability through the flow	
scope	Y	varchar	Field to identify a partner. Will be shared during access of API	Ex: SETU

Request Parameters

Field	Mandatory	Data Type	Description	Comment
number	Y	Numeric (12)	Mobile number for OTP generation start with 91	Ex: 91XXXXXXXXXX77
dob	Y	varchar (10)	Date of birth (YYYY-MM-DD)	Ex: XXXX-XX-XX
user_name	Y	varchar(40)	PAN Name	Ex: Rajesh Ramdin Gupata
pan	Y	varchar (10)	PAN	Ex: XXXXX3854X
type	Y	varchar (1)	type(send or resend)	Ex: S or R
return_pan_response_status	N	Boolean	Flag which Indicates whether the status of the match between the PAN name and PAN date of birth should be included in the response	Ex: true or false
aadhaar_reference_number	N	varchar (12)	Aadhaar reference number	Ex : 12 digit number
lg_code	N	varchar(40)	pass lead code for assisted flow	EX:ABCD123
lg_name	N	varchar(40)	pass lead name for assisted flow	EX:Vishal
promo_code	N	varchar(40)	promo code	
journey	N	varchar (10)	parameters to identify journey	EX: SA

*Validations are present in the code for all mandatory fields (not for non mandatory fields)

Response Parameter

Field	Mandatory	Data Type	Description	Comment

otp_transaction_id	Y	varchar(36)	transaction Id	Ex:58b66b6a-420c-4b80-bee5-dbb5ed9aeb45
number_of_attempts_remaining	Y	Number(1)	Number of attempts remaining	Ex:2
pan_dob_matched	N	varchar(1)	Pan dob match status	Ex : Y or N
pan_name_matched	N	varchar(1)	Pan name match status	Ex : Y or N

Sample request and response

	Request	Response
Otp Generation	<pre>{ number: "91XXXXXXXXXX", dob: "XXXX-XX-XX", pan: "XXXXXXXXXA", user_name: "Rajesh Ramdin Gupta", promo_code: null, type: "S" } { dob: "XXXX-12-15", number: "91XXXXXX" }</pre>	<pre>{ "data": { "number_of_attempts_remaining": 2, "otp_transaction_id": "00fda5d4-7617-4bf7-99f0-ac0a9ca3d611", "pan_dob_matched": "Y", "pan_name_matched": "Y" }, "message": "OTP is sent to the registered mobile number", }</pre>

	<pre> 68558, pan:"XXXXXXXXXX XX", user_name:"Raje sh Ramdin Gupta", promo_code:null, type:"S", "return_pan_res onse_status" : true, "aadhaar_referen ce_number" : "XXXXXXXXXX", jou rnay : "SA" } </pre>	<pre> "response_code": 200 } </pre>

Error Codes

BE Error Code	FE Error code	Scenarios	Next steps
OTL	OTL	Timeout error or other than success response in Bank's OTP generation API.Bank API is down.Response parameter is missing or having null values.	Validate Bank request/response.Check the response code and message from the URL whether it is 200 or not.
LRO	LRO	Internal error in Ex API. Null values in response or some parameters in response are missing. Bank API down.	Validate Bank request/response. Check the response code and message from the URL whether it is 200 or not.
PVA	PVA	Timeout error or other than success response in Bank PAN API. Null values in response or some parameters in response are missing.	Validate Bank request/response. Check the response code and message from the URL whether it is 200 or not.

		Bank API down.	
OVL	OVL	Connection ref Error at E2FA error in Bank verification API. Null values in response or some parameters in response are missing. Bank API down.	Validate Bank request/response. Check the response code and message from the URL whether it is 200 or not.
401	-	Header parameter channel or transaction ID Missing	Validate headers
0006/202		Length of the mobile number is incorrect.	Validate the length of the mobile number and retry.
0008/202		Invalid dob. Please enter valid dob and try again	Validate the length of the DOB and retry.
0009/202		PAN is not valid /operative.	Validate PAN and retry.
0001/202		Missing request parameter mandatory fields: <ul style="list-style-type: none"> ● DOB ● Type ● Pan ● Name 	Validate the request parameter and retry.

0002/202	Entered an invalid transaction Id or transaction Id length is too large.	Enter valid transaction Id and retry.
0002/202	Entered a invalid channel or channel length is too large.	Enter Valid channel (Setu/CSC).
0004/202	OTP limit exhausted	Try after cool-off period

0007/202	Please enter PAN used during registration	PAN entered during relogin is not matching with existing PAN.
0010/202 -	Invalid name	Entered name is less then 2 characters
0011/202 -	Aadhaar ref number mismatch	Aadhaar ref number not matching with the number entered during registration
0014/202 -	Invalid aadhar reference number.Please enter valid aadhar reference number and try again	Aadhar reference number should be 12 digits
0030/202 -	Could not process application	PAN retry limit exceeded
0013/202	Could not process application	Redis issue
0012/202 -	Name does not match on PAN	Entered name does not match with the PAN name
0015/202	Invalid Pan Number. Please enter valid Pan Number - Existing and Valid but event, marked	Validate PAN

		as "Amalgamation" in ITD database	
0016/202		Invalid Pan Number. Validate PAN Please enter valid Pan Number - Existing and Valid but event" "marked as "Acquisition" in ITD database	
0017/202		Invalid Pan Number. Validate PAN Please enter valid Pan Number - Existing and Valid but event" "marked as "Death" in ITD database	
0018/202		Invalid Pan Number. Validate PAN Please enter valid Pan Number - Existing and Valid but event" "marked as "Dissolution" in ITD database",	
0019/202		Invalid Pan Number. Validate PAN Please enter valid Pan Number - Existing and Valid but event" "marked as "Liquidated" in ITD database	
0020/202		Invalid Pan Number. Validate PAN Please enter valid Pan Number - Existing and Valid but event" "marked as "Merger"	

		in ITD database	
0021/202		Invalid Pan Number. Validate PAN Please enter valid Pan Number - Existing and Valid but event marked as “Partition” in ITD database	
0022/202		Invalid Pan Number. Validate PAN Please enter valid Pan Number - Existing and Valid but event marked as “Split” in ITD database	
0023/202		Invalid Pan Number. Validate PAN Please enter valid Pan Number - Existing and Valid but event" "marked as “Under Liquidation” in ITD database	
0024/202		Incorrect PAN (Bank API error)	Enter PAN which belongs to the customer.
0025/202 -		Invalid Pan Number. Please enter valid PAN number - Deleted	
0026/202 -		Invalid Pan Number. Validate PAN Please enter valid PAN number - PAN Marked as Deactivated	
0027/202 -		Invalid Pan Number. Validate PAN Please enter valid Pan Number - PAN Marked as Fake	

400	-	Eligibility to open online FD is 18 years. Please visit nearest branch.	Customer Age should be > 18 years.
400	-	Hey, to open an FD online maximum age should be 200 years. Request you to visit your nearest branch to complete application.	Incorrect DOB entered, it should be less than or equal to 200 years.
500	-	Timeout error or other than success response in Bank API.Null values in response or some parameters in response are missing. Bank API down.	Validate Bank request/response.Check the response code and message from the URL whether it is 200 or not.

DB Addition

Table	Columns
Customer OTP transaction	<ul style="list-style-type: none"> Aadhaar ref number will be captured in the DB for future reference. `is_name_verified` and `is_dob_verified` will be stored in the database and included in the response for relogin scenarios, as the PAN_validation API is not called during these instances.
Master customer data	<ul style="list-style-type: none"> Aadhaar ref number will be captured in the DB for future reference. `is_name_verified` and `is_dob_verified` will be stored in the database and included in the response for relogin scenarios, as the PAN_validation API is not called during

	these instances.
--	------------------

Verification OTP API

Overview

The specifications for OTP verification and customer identification are used for verifying OTPs, checking customer status (existing or new), and retrieving customer details based on PAN and mobile number.

Ex API	HDFC API
Experince login generation api/v3/customer_otpservice/verify-registration-otp	<p>Verify OTP https://10.226.163.41:5142/ETWOFAOTP/PS_ETWOF_AO_IP</p> <p>CASA check(Check basis mob and dob) and basis mobile and PAN both and then establish ETB</p> <p>https://obpuatactiveactiveocm.hdfcbankuat.com:8002/com.ofss.fc.cz.hdfc.obp.webservice/FetchCustCASARest/FetchCustomerCASADetailsRestWrapperService</p> <p>1 aadhaar 1 account</p> <p>https://obpuatactiveactiveocm.hdfcbankuat.com:8002/com.ofss.fc.cz.hdfc.obp.webservice/CustAndAcctDtlsInq/CustomerAndAccountDetailsInquiryRestWrapperService</p> <p>Data Screening API:</p> <p>http://10.229.164.41:8011/loans/asset-risk-identification/v1/dpip/dataScreening</p> <p>Access Token Generation API:</p> <p>https://10.226.163.44:5142/realm/OBRH/protocol/openid-connect/token</p>

Partner Integration Document

1. Using otp_transaction_id and OTP received through SMS Verify OTP API will be called.

2. Verification API will internally call the HDFC Verification API . This is an orchestrated API executing OTP validation API and Customer Identification API as well to identify ETB/NTB.
3. If verification is successful then the customer is identified/created and an active session (JWT) token is generated.
4. Customer gets 3 attempts to verify OTP. After the limit exhaustion, 10 minutes cooling off period will be triggered before the customer retries again.
5. PAN validation is mandatory. We identify customers based on PAN and Mobile Number. The API is called to validate new customers, in case of existing customers PAN API is not called.
6. Creation of unique customer identifiers;
7. Post OTP verification customer ID is created which is used to call FD State API after customer logs into the application.
8. After OTP verification data screening API will be called for MULE account status with the Mobile number PAN entered.
9. If the status in the data screening API is not CONFIRMED then journey will continue else journey will be drop.

Header Parameters

Field	Mandatory	Data Type	Description	
transactionId	Y	Varchar 40	Unique number for traceability through the flow	
channel	Y	varchar (10)	Field to identify a partner. Will be shared during access of API	Ex: SETU
scope	Y	varchar	Field to identify a partner. Will be shared during access of API	

Request Parameters

Field	Mandatory	Data Type	Description	Comments
otp	Y	Numeric (6)	Mobile OTP	Ex: 123456
otp_transaction_id	Y	Varchar 36	transaction Id received during OTP generation	Ex:58b66b6a-420c-4b80-bee5-dbb5ed9aeb45
journey	N	varchar (10)	parameters to identify the journey	EX: SA

Response Parameter

Field	Mandatory	Data Type	Description	Comment
access_token	Y	Varchar	Access Token For Authorization	Ex:eyJ0eXAiOiJKV1QiLCJhbGciOiJIUzI1NiJ9.eyJmcmVzaCI6ZmFsc2UsImIhdCI6MTcxODM3MDU2MywianRpljoiNGU1MTEzYTMtODQyMy00MDM0LWI2ZjEtMzQwMTIyZjhNjI2IwidHlwZSI6ImFjY2VzcylsInN1YiI6ImQ2NjY4ZTFjLTJiNmYtNDUwYy1iNWUyLWM0NjBhMjU3NjQ5NSIsIm5iZI6MTcxODM3MDU2MywiY3NyZiI6ImEzOTg5MGQxLTk1NTUtNDkxMS05NjRhLTVjNWEyNzc4ZjBjOSIsImV4cCI6MTcxODQ3ODU2M30.0yXNUEjPDPgv7Aq5tJpyDI0seFEXJSGhTpTmRMp82NQ

journey_reference_no	Y	Varchar 36	Customer Identifier	Ex:d6668e1c-2b6f-450c-b5e2-c460a2576495
language	N	Varchar	Preferred Languages If selected	EN : English , else null
name	Y	Varchar	Customer Name	Ex: Sridevi Pothy
is_existing_customer	Y	Varchar(1)	-	Ex:Y/N

Sample request and response

Request	Response

EKYC Redirection API

Overview

This API sends a DAP page static url,datetime and saves the journey_reference_no, datetime in the db when we send the response to the partner.

Ex API	HDFC API
Experince Ekyc Redirection <code>/api/v3/ekyc/ekyc-redirection</code>	DAP static url https://dapuat1.hdfcbank.com/HDFCDigitalAadhaar/AadhaarIntegration/InitiateRequest

10. Using journey_reference_no, and access token received through Verification OTP API, and using journey parameter ekyc redirection api will be called.
11. Ekyc redirection api validates the access token(JWT) by decoding it, using jwt secret key .
12. If decoding is successful then the consent code is validated. Its value will be verified against the database, if matches then will proceed with the api else will return the error response. Here consent code is optional.
13. Validate the journey field entered, if the journey field is not existing then return the error response.
14. journey_reference_no will be validated against db values, if matches then will continue or will return the error response.
15. Here application_id will be created in the database(fixed_deposit_application table) if application_id is not existing in the database for a journey_reference_no mentioned in the request body.
16. Save the current journey status i.e “EKYC_INITIATED” in the database((fixed_deposit_application table)).
17. Once above all validations are completed then we will save the journey_reference_no, current datetime in the database.
18. Then send the DAP page static url and datetime saved in the database as a response to the partner.

Header Parameters

Field	Mandatory	Data Type	Description	Comment
channel	Y	string	Field to identify a partner. Will be shared during access of API	Ex: SETU
transactionId	Y	string	unique number for traceability through the flow	Ex:abcdef
access_token	Y	String	Access token for Authorization of API	<p>Note: Partner will send the access_token in header and API Gateway to accept and pass the same as "Authorization" header to backend</p> <p>Ex:</p> <p>eyJ0eXAiOiJKV1QiLCJhbGciOiJIUzI1NiJ9.eyJmcmVzaCI6ZmFsc2UsImhdC16MTcxOTYyMzA5OCwianRpjoiYTUxMGY3YWQtZjUwOC00OTM4LWJhYTAtZmYwMTI0OWQ3YzMyliwidHlwZSI6ImFjY2VzcylsInN1YiI6IjA2NzMwNDFmLTViYzMtNDVjNC04ZjZjLTBhZTNhMmM1Mjk2NCIsIm5iZiI6MTcxOTYyMzA5OCwiY3NyZiI6IjgwMDBINzM4LWVjZmUtNGFkZC1hMGMyLWI2NzUzNGM3OGY2NSIslmV4cCI6MTcxOTYyNjY5OH0.SEGzf_Cg0y1mp2j_5HFfo1PxW3mqzzywV3tiQ4DKAgw</p>
scope	Y	varchar	Field to identify a partner. Will be shared during access of API	EX: SETU

Request Parameters

Field	Mandatory	Data Type	Description	Comment
journey_reference_no	Y	string	journey_reference_no to be entered by customer	Ex:0673041f-5bc3-45c4-8f6c-0ae3a2c52964
ekyc_consent_code	N	string	Ekyc consent code	Ex:AADHAAR OTP
journey	Y	varchar(10)	parameters to identify the journey	EX: SA

Response Parameters

EKYC redirection api	{ "journey_reference_no": "0673041f-5bc3-45c4-8f6c-0ae3a2c52964", "ekyc_consent_code": "AADHAAR OTP", "journey": "SA" }	{ "data": { "datetime_of_static_url_sent": "Fri, 05 Jul 2024 14:31:01 GMT", "static_page_url": "https://dapuat1.hdfcbank.com/HDFCDigitalAadhaar/AadhaarIntegration/InitiateRequest" }, "message": "Successfully returned the DAP static page url", "response_code": 200 }

Error Codes

BE Error Code	FE Error Code	Scenarios	Next steps
401/401		Missing Authorization Header	Please enter valid access token
0001/202	-	Missing journey_reference_no.	Validate the request parameter and retry.

0001/20 2	-	Consent code is not matching	Enter valid consent code and retry
401/401	-	Invalid access token.	Enter valid access token.
401/401		token expired	Enter valid access token(regenerate the token).
0002/20 2	-	Datetime is not saved in db when we sent the static url	Datetime is not saved in db check log when we sent the static url and retry.
0002/20 2	-	Invalid journey_reference_no.Pleas e enter string value and try again	Journey reference number is not valid,enter valid journey reference number and try again
0001/20 2		journey_reference_no is not matching	Journey reference number is not valid,enter valid journey reference number and try again

0002/202		Journey is missing,please enter valid journey	Please enter a valid journey.
0002/202	-	Invalid channel.Please enter valid channel and try again	Please enter valid channel.
0002/202	-	Invalid journey.Please enter valid journey and try again	Please enter valid journey
500/500	-	Error occurred during sending ekyc redirection link.	Timeout error. Null values in request/response.or some parameters in response are missing. Check the response code and message from the URL whether it is 200 or not.
401/401		Missing transactionId	Please enter valid transactionId.

DB Addition

Table	Columns
dap_static_link_share_history	id, customer_id, link_sent_datetime

customer_id in dap_static_link_share_history table will be a foreign key, which will refer to the value of master_customer's customer_id value.

EKYC Status Inquire API

Overview

This API gets aadhaar vault data using aadhaar reference number sent by a partner and checks whether ekyc is successful. Then does the Aadhaar dedupe check based on aadhaar reference number, if customer is existing to bank then pan/aadhaar name match and mobile link to aadhaar will not be done. If the customer is new to the bank then a mobile link to aadhaar and pan/aadhaar name match will be done.

Ex API	HDFC API
Experince ekyc-status-inquire /api/v3/ekyc/ekyc-status-inquire	AADHAAR_AUX_URL https://api-uat.hdfcbank.com/OBPAPI/com.ofss.fc.cz.hdfc.obp.aadhaarvault.webservice/GetAuxDataRestWrapperService/getAuxData AADHAAR_DEDUPE_URL https://api-uat.hdfcbank.com/OBPAPI/com.ofss.fc.cz.hdfc.obp.webservice/CustAndAcctDtlsInq/CustomerAndAccountDetailsInquiryRestWrapperService GET_AADHAR_API_URL https://api-uat.hdfcbank.com/OBPAPI/com.ofss.fc.cz.hdfc.obp.aadhaarvault.webservice/GetAadhaarRestWrapperService/getAadhaar AADHAAR_PAN_NAME_MATCH_URL https://api-uat.hdfcbank.com/SOAAPI/Silver/Posidex_Address_Match/ProxyService/PS_PrimeVerService MOBILE_URL https://api-uat.hdfcbank.com/SOAAPI/Silver/uidai-ekyc/ProxyService/PS_eKYCMobileValidation

19. Using journey_reference_no,aadhaar_reference_number,rrn_no,journey and

access token received through Verification OTP API ekyc status inquire api will be invoked.

20. Ekyc status inquiry api validates the access token(JWT) by decoding it,using jwt secret key .
21. If decoding is successful then the journey will be continued else it will be dropped.
22. Validate the journey field entered,if the journey field is not existing then return the error response.
23. journey_reference_no will be validated against db values,if matches then will continue or will return the error response.
24. Read the journey status from the journey reference table(fixed_deposit_aplication),if it is “EKYC_INITIATED” then continue with the journey,else throw the error message that the journey is not “EKYC_INITIATED”.
25. Aadhaar reference number will be validated,if none then journey will get ended else will continue with journey.

Flow:

Db_table:customer_aadhaar_details table.

Db_table_address:customer_address

Db_table_journey:fixed_deposit_aplication

We have 4 ekyc completion stages:

- ekyc_completed
- etb_checked
- mobile_linked_to_aadhaar
- pan_aadhaar_name_match

3 flags for status update:

- is_etb_checked
- is_mobile_linked_to_aadhaar
- is_pan_aadhaar_name_match

Case 1:

1. journey_reference_no not existing in Db_table.

2. Now we have to read ekyc verified details from aadhaar vault,using aadhaar_aux_data api. It includes aadhaar address, name, dob, gender, photo.
3. All this needs to be saved in Db_table, Db_table_address. Db_table_address stores address, remaining will be saved in Db_table.
4. Now among the ekyc completion stage ekyc_completed stage is completed, this needs to be saved in Db_table.
5. Now ekyc completion stage ekyc_completed needs to be saved in db.
6. Next we will check for aadhaar dedupe. If customer is etb then will update the ekyc completion stage as etb_checked.
7. If the customer is etb, then update the is_etb_checked as true, else false.
8. Now we don't have to do the mobile_linked_to_aadhaar, pan_aadhaar_name_match validations.
9. Now in the fixed deposit table we have to update the journey_status as EKYC_VERIFIED.
10. Now send the success response, which contains address, name, dob, gender and is_etb_checked status.
11. If the customer is not etb, then we will update the ekyc completion stage as etb_checked. And is_etb_checked status as false.

12. Next validation will be pan_aadhaar_name_match. Check whether pan and aadhaar name matches. If match % is greater than 70% then it is true else false.
13. Now set this true or false value to is_pan_aadhaar_name_match flag.
14. Now we will update the ekyc completion stage as pan_aadhaar_name_match.
15. To do the mobile number link to aadhaar validation, we need aadhaar number, which we get by passing aadhaar_reference_number to the get_aadhaar_api.
16. Now we have to do mobile_linked_to_aadhaar validation. If it is true then is_mobile_linked_to_aadhaar status will be updated as true else false.
17. Now we will update the ekyc completion stage as mobile_linked_to_aadhaar.
18. Now in the Db_table_journey we have to update the journey_status as EKYC_VERIFIED.
19. Now send the success response, which contains address, name, dob, gender and is_etb_checked status, is_mobile_linked_to_aadhaar and is_pan_aadhaar_name_match.

Case2:

20. journey_reference_no is present in Db_table.
21. Now check whether ekyc completion stage value,if value present then do below process
 - a. Any one of the values among 4 ekyc completion stages will be present.
 - b. If ekyc completion stage is ekyc_completed then we don't have to fetch ekyc verification data from aadhaar vault. Just read the name,dob,gender,photo from Db_table and address from customer_address table.
22. As we are saving ekyc stage completion value in Db_table,we can resume the journey from the next stage which is saved in Db_table.
23. For example if in Db_table ekyc stage is ekyc_completed then we have to do remaining validations like
 - a. Etb_checked
 - b. Pan_aadhaar_name_match
 - c. Mobile_linked_to_aadhaar
24. If is_etb_checked is true, then the customer will be etb,then skip validations pan_aadhaar_name_match and mobile_linked_to_aadhaar.
25. Save the is_etb_checked flag to Db_table.
26. Update the journey status as EKYC_VERIFIED.
27. Now send the success response,which contains address,name,dob,gender and is_etb_checked status.
28. If is_etb_checked is false,then follow the steps from 12-19 in case1.
29. If in Db_table ekyc stage is Etb_checked, then we have to do remaining validations like Pan_aadhaar_name_match,mobile_linked_to_aadhaar.
30. If is_etb_checked is true, then the customer will be etb,then skip validations pan_aadhaar_name_match and mobile_linked_to_aadhaar.
31. Update the journey status as EKYC_VERIFIED.
32. Now send the success response,which contains address,name,dob,gender and is_etb_checked status.
33. If etb_checked is false,then follow the steps from 12-19 in case1.
34. If in Db_table ekyc stage is pan_aadhaar_name_match, then we have to do remaining validations like mobile_linked_to_aadhaar.
35. Now read the ekyc details(name,dob,gender,photo) from Db_table and address from customer_address table.
36. Also read the status flags is_etb_checked,is_pan_aadhaar_name_match.
37. Inorder to do mobile validation we need aadhaar number,which we get using get

aadhaar api.

38. Now do the mobile_linked_to_aadhaar validation. Update the flag status is_mobile_linked_to_aadhaar to Db_table.
39. Also ekyc completion stage to mobile_linked_to_aadhaar.
40. Update the journey status as EKYC_VERIFIED.
41. Now send the success response,which contains address,name,dob,gender and is_etb_checked status,is_mobile_linked_to_aadhaar and is_pan_aadhaar_name_match.
42. If in Db_table ekyc stage is Mobile_linked_to_aadhaar then read all the 3 flag status from db such as,is_etb_checked,is_pan_aadhaar_name_match,is_mobile_linked_to_aadhaar.
43. Update the journey status as EKYC_VERIFIED.
44. Now send the success response,which contains address,name,dob,gender and is_etb_checked status,is_mobile_linked_to_aadhaar and is_pan_aadhaar_name_match.
45. If ekyc completion stage value is not existing in Db_table then follow all steps in case1.
46. Except if the customer is found to be etb,we don't generate prn tag.else we have to generate prn tag and call the crm api.
47. Procedure to generate prn tag as follows.
48. Convert the photo data in base64 format to image format.
49. A template will be used for creating aadhaar pdf,which will be in docx format.
50. Template values will be updated with the values extracted from aadhaar vault data.
51. Docx template will be converted to pdf format.
52. Pdf data will be converted to base64 string format.
53. Then base64 string format will be encoded and saved in customer aadhaar details table.
54. Then crm api will be invoked which will use photo and prn tag to generate aadhaar pdf.

Header Parameters

Field	Mandatory	Data Type	Description	Comment

channel	Y	string	Field to identify a partner. Will be shared during access of API	Ex: SETU
transactionId	Y	string	unique number for traceability through the flow	Ex:abcdef
access_token	Y	String	Access token for Authorization of API	<p>Ex:</p> <p>eyJ0eXAiOiJKV1QiLCJhbGciOiJIUzI1NiJ9.eyJmcmVzaCI6ZmFsc2UsImIhdCI6MTcxOTYyMzA5OCwianRpIjoiYTUxMGY3YWQtZjUwOC00OTM4LWJhYTAzZmYwMTI0OWQ3YzMyIwidHlwZSI6ImFjY2VzcylsInN1YiI6ljA2NzMwNDFmLTViYzMtNDVjNC04ZjZjLTBhZTNhMmM1Mjk2NCIsIm5iZil6MTcxOTYyMzA5OCwiY3NyZil6ljgwMDBINzM4LWVjZmUtNGFkZC1hMGMylWI2NzUzNGM3OGY2NSIsImV4cCI6MTcxOTYyNjY5OH0.SEGzf_Cg0y1mp2j_5HFfo1PxW3mqzzywV3tiQ4DKAgw</p> <p>Note: Partner will send the access_token in header and API Gateway to accept and pass the same as "Authorization" header to backend</p>

EKYC Redirection API V2

Overview

This API sends a dynamic page url,datetime and saves the journey_reference_no, datetime,dynamic_url,kyc_journey_id in the db when we send the response to the partner.

Ex API	HDFC API
Experince Ekyc Redirection /api/v3/ekyc/ekyc-redirection-v2	EKYC Engine Dynamic URL https://10.226.163.44:5142/KYCEngine/ProxyService/v1/PS_InitiateSyncKycRequest

1. Using journey_reference_no, and access token received through Verification OTP API, and using journey parameter ekyc redirection api will be called.
2. Ekyc redirection api validates the access token(JWT) by decoding it, using jwt secret key .
3. If decoding is successful then the consent code is validated. Its value will be verified against the database, if matches then will proceed with the api else will return the error response. Here consent code is optional.
4. Validate the journey field entered, if the journey field is not existing then return the error response.
5. journey_reference_no will be validated against db values, if matches then will continue or will return the error response.
6. Here application_id will be created in the database(fixed_deposit_application table) if application_id is not existing in the database for a journey_reference_no mentioned in the request body.

7. Save the current journey status i.e “EKYC_INITIATED” in the database((fixed_deposit_application table)).
8. Once above all validations are completed then we will call EKYC engine dynamic link generation API and will save the journey_reference_no, current datetime, dynamic_link, kyc_jounrey_id in the database.
9. Then send the ekyc engine dynamic URL, kyc_jounrey_id and datetime saved in the database and dynamic URL, kyc_jounrey_id will be given as a response to the partner.

Header Parameters

DB Addition

Table	Columns
dap_static_link_share_history	id, customer_id, link_sent_datetime, dynamic_link, kyc_journey_id

customer_id in dap_static_link_share_history table will be a foreign key, which will refer to the value of master_customer's customer_id value.

EKYC Status Inquire API V2

Overview

This API gets aadhaar data using the recent kyc_journey_id using the journey_reference_no sent by a partner and checks whether ekyc is successful if callback is not received. If callback is received then the ekyc details will be taken from DB. Then does the Aadhaar dedupe check based on aadhaar reference number,if customer is existing to bank then pan/aadhaar name match and mobile link to aadhaar will not be done. If the customer is new to the bank then a mobile link to aadhaar and pan/aadhaar name match will be done.

Ex API	HDFC API
Experince ekyc-status-inquire /api/v3/ekyc/ekyc-status-inquire-v2	EKYC_ENGINE_URL https://pehchaan-uat2.hdfcbank.com:443/kycengine/kyc-cust-enquiry/v1/getKycStatusDetails AADHAAR_DEDUPE_URL https://api-uat.hdfcbank.com/OBPAPI/com.ofss.fc.cz.hdfc.obp.webservice/CustAndAcctDtlsInq/CustomerAndAccountDetailsInquiryRestWrapperService GET_AADHAR_API_URL https://api-uat.hdfcbank.com/OBPAPI/com.ofss.fc.cz.hdfc.obp.aadhaarvault.webservice/GetAadhaarRestWrapperService/getAadhaar AADHAAR_PAN_NAME_MATCH_URL https://api-uat.hdfcbank.com/SOAAPI/Silver/Posidex_Address_Match/ProxyService/PS_PrimeVerService MOBILE_URL https://api-uat.hdfcbank.com/SOAAPI/Silver/uidai-ekyc/ProxyService/PS_eKYCMobileValidation

1. Using journey_reference_no, journey and access token received through Verification OTP API ekyc engine ekyc status inquire api will be invoked.
2. Ekyc engine status inquiry api validates the access token(JWT) by decoding it, using jwt secret key .
3. If decoding is successful then the journey will be continued else it will be dropped.
4. Validate the journey field entered, if the journey field is not existing then return the error response.
5. journey_reference_no will be validated against db values, if matches then will continue or will return the error response.
6. Read the journey status from the journey reference

table(fixed_deposit_application),if it is “EKYC_INITIATED” then continue with the journey,else throw the error message that the journey is not “EKYC_INITIATED”.

Flow:

Db_table_link:dap_static_link_share_history table.

Db_table:customer_aadhaar_details table.

Db_table_address:customer_address

Db_table_journey:fixed_deposit_apllication

We have 4 ekyc completion stages:

- ekyc_completed
- etb_checked
- mobile_linked_to_aadhaar
- pan_aadhaar_name_match

3 flags for status update:

- is_etb_checked
- is_mobile_linked_to_aadhaar
- is_pan_aadhaar_name_match

Case 1:

Callback not received and journey_reference_no not existing in Db_table.

1. Now we have to read ekyc verified details from ekyc engine,using ekyc engine status enquiry api.It includes aadhaar address,name,dob,gender,photo and kyc journey id.
2. All this needs to be saved in Db_table,Db_table_address. Db_table_address stores address,remaining will be saved in Db_table.
3. Now among the ekyc completion stage ekyc_completed stage is completed,this needs to be saved in Db_table.
4. Now ekyc completion stage ekyc_completed needs to be saved in db.
5. Next we will check for aadhaar dedupe.If customer is etb then will update the ekyc completion stage as etb_checked.
6. If the customer is etb, then update the is_etb_checked as true,else false.
7. Now we don't have to do the

- mobile_linked_to_aadhaar,pan_aadhaar_name_match validations.
8. Now in the fixed deposit table we have to update the journey_status as EKYC_VERIFIED.
 9. Now send the success response, which contains address, name, dob, gender and is_etb_checked status.
 10. If the customer is not etb, then we will update the ekyc completion stage as etb_checked. And is_etb_checked status as false.

 11. Next validation will be pan_aadhaar_name_match. Check whether pan and aadhaar name matches. If match % is greater than 70% then it is true else false.
 12. Now set this true or false value to is_pan_aadhaar_name_match flag.
 13. Now we will update the ekyc completion stage as pan_aadhaar_name_match.
 14. To do the mobile number link to aadhaar validation, we need aadhaar number, which we get by passing aadhaar_reference_number to the get_aadhaar_api.
 15. Now we have to do mobile_linked_to_aadhaar validation. If it is true then is_mobile_linked_to_aadhaar status will be updated as true else false.
 16. Now we will update the ekyc completion stage as mobile_linked_to_aadhaar.
 17. Now in the Db_table_journey we have to update the journey_status as EKYC_VERIFIED.
 18. Now send the success response, which contains address, name, dob, gender and is_etb_checked status, is_mobile_linked_to_aadhaar and is_pan_aadhaar_name_match.

Case2:

Callback received and journey_reference_no is present in Db_table.

1. Now check whether ekyc completion stage value, if value present then do below process
 - a. Any one of the values among 4 ekyc completion stages will be present.
 - b. If ekyc completion stage is ekyc_completed then we don't have to fetch ekyc verification data from aadhaar vault. Just read the name, dob, gender, photo from Db_table and address from customer_address table.
2. As we are saving ekyc stage completion value in Db_table, we can resume the journey from the next stage which is saved in Db_table.
3. For example if in Db_table ekyc stage is ekyc_completed then we have to do

remaining validations like

- a. Etb_checked
 - b. Pan_aadhaar_name_match
 - c. Mobile_linked_to_aadhaar
4. If is_etb_checked is true, then the customer will be etb,then skip validations pan_aadhaar_name_match and mobile_linked_to_aadhaar.
 5. Save the is_etb_checked flag to Db_table.
 6. Update the journey status as EKYC_VERIFIED.
 7. Now send the success response,which contains address,name,dob,gender and is_etb_checked status.
 8. If is_etb_checked is false,then follow the steps from 11-18 in case1.
 9. If in Db_table ekyc stage is Etb_checked, then we have to do remaining validations like Pan_aadhaar_name_match,mobile_linked_to_aadhaar.
 10. If is_etb_checked is true, then the customer will be etb,then skip validations pan_aadhaar_name_match and mobile_linked_to_aadhaar.
 11. Update the journey status as EKYC_VERIFIED.
 12. Now send the success response,which contains address,name,dob,gender and is_etb_checked status.
 13. If etb_checked is false,then follow the steps from 11-18 in case1.
 14. If in Db_table ekyc stage is pan_aadhaar_name_match, then we have to do remaining validations like mobile_linked_to_aadhaar.
 15. Now read the ekyc details(name,dob,gender,photo) from Db_table and address from customer_address table.
 16. Also read the status flags is_etb_checked,is_pan_aadhaar_name_match.
 17. Inorder to do mobile validation we need aadhaar number,which we get using get aadhaar api.
 18. Now do the mobile_linked_to_aadhaar validation. Update the flag status is_mobile_linked_to_aadhaar to Db_table.
 19. Also ekyc completion stage to mobile_linked_to_aadhaar.
 20. Update the journey status as EKYC_VERIFIED.
 21. Now send the success response,which contains address,name,dob,gender and is_etb_checked status,is_mobile_linked_to_aadhaar and is_pan_aadhaar_name_match.
 22. If in Db_table ekyc stage is Mobile_linked_to_aadhaar then read all the 3 flag status from db such as,is_etb_checked,is_pan_aadhaar_name_match,is_mobile_linked_to_aadhaar.

23. Update the journey status as EKYC_VERIFIED.
24. Now send the success response, which contains address, name, dob, gender and is_etb_checked status, is_mobile_linked_to_aadhaar and is_pan_aadhaar_name_match.
25. If ekyc completion stage value is not existing in Db_table then follow all steps in case1.
26. Then crm api will be invoked which will use photo and prn tag received from the callback. If the callback of doc update is not successful then error message will be given in response to the partner

Header Parameters

Field	Mandatory	Data Type	Description	Comment

Master API

Overview

The master API provides comprehensive access to all types of master data.

Ex API	HDFC API
Experince master api https://api-uat.hdfcbank.com/OBPAPI/com.ofss.fc.cz.hdfc.obp.webservice/SimulateTermDepositRestWrapper/simulate	

- The master API dynamically returns various types of master data based on the request parameters
- It also integrates with the bank's API to fetch real-time fixed deposit (FD) interest rates. Upon receiving a request for FD interest rates, the master API retrieves the latest rates from the bank, stores them, and returns the updated information

Header Parameters

Field	Mandatory	Data Type	Description	Comment
channel	Y	varchar (10)	Field to identify a partner. Will be shared during access of API	Ex: SETU
transactionId	Y	varchar(40)	unique number for traceability through the flow	
scope	Y	varchar	Field to identify a partner. Will be shared during access of API	Ex: SETU

Request Parameters

Field	Mandatory	Data Type	Description	Comment
marital_status	N	varchar(1)	Marital status Y indicates to return all the types of marital status	Ex: { "marital_status": "Y" }
relation_ship	N	json	Relation_ship which indicates to return all the types of relationships	Ex: { "relation_ship":{ "relationship": "Y", "journey_reference_no": "f1c4f1a6-e38b-4444-971c-5ea964b5910e" } }

				}
city	N	json	City which indicates to return all the cities present	Ex: { "city": { "city_name": "Ud" } }
employee_type	N	varchar (1)	Employee type as Y indicates to return all the types of employee	Ex: { "employee_type": "Y" }
organization_type	N	varchar(1)	Organization type as Y indicates to return all the types of organization	Ex: { "organization_type": "Y" }
self_employed_professional	N	varchar (1)	Self_employed_professional type as Y indicates to return all the types of self_employed_professional	Ex: { "self_employed_professional": "Y" }
nature_of_business	N	varchar(1)	nature_of_business as Y indicates to return all the types of nature of business	EX: { "nature_of_business": "Y" }
annual_income	N	varchar(1)	Annual_income as Y indicates to return all the list of annual incomes available in master	EX: { "annual_income": "Y" }
residence_type	N	varchar(1)	Residence_type as Y indicates to return all the list of residence types available in master	Ex: { "residence_type": "Y" }

				}
source_of_income	N	json	Source_of_income is a json which has employee_code which indicates to send source of income of employee code passed	Ex: { "source_of_income": { "employee_code": 20 } }
firm_type	N	varchar(1)	firm_type as Y indicates to return all the list of firm types available in master	Ex: { "firm_type": "Y" }
branch	N	Json	Branch json has pincode and state id which indicates to send the branches present in the state id and pincode passed	Ex: { "branch": { "pincode": "560009", "state_id": "4114c1fc-67c1-4454-b2e7-fedae567fe94" } }
product	N	Json	Product is a json which has age,annual_income,channel, gender, occupation_type, customer_id. Based on the parameter the list of products are passed	Ex: { "product": { "age": 26, "annual_income": 99999, "channel": "unassisted", "gender": "M", "occupation_type": "Unassisted", "customer_id": "4114c1fc-67c1-4454-b2e7-fedae567fe94" } }

				<pre>"occupation_type_id": 20, "journey_reference_no": "b57f5c99-e599-4d70-9b12-003daed27d74" } }</pre>
pincode	N	varchar(10)	All the pincode which matches in the request is sent in response	Ex: { "pincode": "575" }

*Validations are present in the code for all mandatory fields (not for non mandatory fields)

Response Parameter

Get ETB Customer Account Data

Overview

This API retrieves the account details of ETB customers. It integrates with both the FATCA and Aadhar deduplication APIs to ensure comprehensive and compliant account information.

Ex API	HDFC API
Experince Get ETB Account Details <code>/api/v3/customer_otpservice/get-etb-account-details</code>	<p>Fatca https://api-uat.hdfcbank.com/OBPAPI/com.ofss.fc.cz.hdfc.obp.webservice/FetchCustomerAccountAmlFatcaDetailsRestWrapper/fetchCustomerAccountAmlFatcaDetails</p> <p>Aadhar Dedupe</p> <p>https://api-uat.hdfcbank.com/OBPAPI/com.ofss.fc.cz.hdfc.obp.webservice/CustAndAcctDtlsInq/CustomerAndAccountDetailsInquiryRestWrapperService</p>

- In the Get ETB Account Details process, the API initially calls the FATCA API using the mobile number and PAN. If no result is found, it will then use the mobile number and date of birth (DOB)
- If the FATCA API returns no results and the optional parameter aadhaar_reference_number is provided, the API will subsequently call the Aadhar deduplication API

Header Parameters

Mandate API

Overview

To fetch balance of ETB and NTB customer accounts, Firstly mandate should be registered and maintained w.r.t merchant id and account no(for which bal inquiry to be done) in FC.

For registered mandate and accounts only, Partner will be able to fetch Balance inquiry for respective ETB and NTB accounts.

Ex API	HDFC API
Experince Mandate api /api/v3/customer_otpservice/company-account-maintenance	Fatca https://api-uat.hdfcbank.com/OBPAPI/com.ofss.fc.cz.hdfc.obp.webservice/FetchCustomerAccountAmlFatcaDetailsRestWrapper/fetchCustomerAccountAmlFatcaDetails Mandate https://api-uat.hdfcbank.com/OBPAPI/com.ofss.fc.cz.hdfc.obp.webservice/CompanyAndAccountMaintenance/doCompanyAndAccountMaintenance

If partner passes mask account no in the input then :

- Firstly call AML fatca basis Mob and PAN ,and get the clear account no in the output. (Match the last 4 digit of the input account no).
- Then call doCompanyAndAccountMaintainence API.

If partner passes clear account no in the input then :

- Directly call doCompanyAndAccountMaintainence API

DB Records

If the account is found in the FATCA API, we check the account number in the Mandate API. If found, we store the account number, merchant ID, and set the `is_mandate` flag to true in the Mandate Accounts table. If the account number is not found in the FATCA API, we store the `is_mandate` flag as false, with the account number and merchant ID as blank in the Mandate Accounts table.

Login Mobile Change API

Overview

This API is used for generating an OTP to change the login mobile number. It validates the mobile number against Aadhaar details and generates an OTP for the user to verify the new mobile number.

Ex API	HDFC API
Experince mobile change api <code>/api/v3/customer_otpservice/generate-login-mobile-change-otp</code>	<p>CASA check(Check basis mob and dob) and basis mobile and PAN both and then establish ETB</p> <p>https://obpuuatactiveactiveocm.hdfcbankuat.com:8002/com.ofss.fc.cz.hdfc.obp.webservice/FetchCustCASARest/FetchCustomerCASADetailsRestWrapperService</p> <p>Get aadhaar</p> <p>https://api-uat.hdfcbank.com/OBPAPI/com.ofss.fc.cz.hdfc.obp.aadhaarvault.webservice/GetAadhaarRestWrapperService/getAadhaar</p> <p>Aadhaar Mobile Validation API</p> <p>https://api-uat.hdfcbank.com/SOAAPI/Silver/uidai-ekyc/ProxyService/PS_eKYCMobileValidation</p> <p>OTP Generation</p> <p>https://10.226.163.41:5142/CC_IVR/ProxyService/PS_OTPGeneration_SMSService</p>

Partner Integration Document

If mob linkage fails as per Aadhaar dedupe - Customer will be allow to enter new Mob no and authenticate again with existing Aadhar reference No and ekyc should be skipped .

Login Mobile Change Verification OTP API

Overview

This API generates an OTP to change the login mobile number. It validates the mobile number against Aadhaar details and generates an OTP for the user to verify the new mobile number.

Ex API	HDFC API
Experince login Verification api/v3/customer_otpservice/v erify-registration-otp	Verify OTP <a href="https://10.226.163.41:5142/ETWOFAOTP/PS_ETWOF
AO_TP">https://10.226.163.41:5142/ETWOFAOTP/PS_ETWOF AO_TP

1. Using otp_transaction_id and OTP received through SMS Verify OTP API will be called.
2. Verification API will internally call the HDFC Verification API .
3. Customer gets 3 attempts to verify OTP. After the limit exhaustion, 10 minutes cooling off period will be triggered before the customer retries again.
4. If OTP verification API is successful, then it will generate OTP. We will get otp_transaction_id in response for verification.
7. OTP will be sent to the entered mobile number.

400/400 Or 0003/500	-	API Back-end Service Not Available or Timed-out LVO01: API TIMEOUT ERROR LVO: API TIMEOUT ERROR	Check logs
0003/400	-	OVL: Connectionref Error at E2FA	Once the API is up, can try the scenario again.

VKYC initiation

Overview

This API generates a VKYC link for a customer using the application ID, sends it in the response, and also delivers it to the end user via SMS and email.

Ex API	HDFC API
Experince vkyc link generation api/v3/video-kyc/initiate-vkyc-experience	Initiate VKYC https://10.226.163.44:5142/VKYC/ProxyService/PS_InitiateVideoKYCfromIDFY

1. Based on the journey and the application id, VKYC link will be generated by calling the bank api.
2. In the response we will get the vkyc initiation link and link expiry date.
3. The generated link will be sent to the end user's mobile number and email..

Header Parameters

Field	Mandatory	Data Type	Description	Comment
transactionId	Y	Varchar 40	Unique number for traceability through the flow	Ex: "86b66b6a-420c-4b80-bee5-dbb5ed9aeb45"
scope	Y	varchar	Field to identify a partner. Will be shared during access of API.	EX: SETU
access_token	Y	varchar	Access Token	Ex:eyJ0eXAiOiJKV1QiLCJhbGciOiJIUzI1NiJ9.eyJmcmVzaCI6ZmFsc

				2UsImIhdCI6MTcyMDE1OTU4MCwianRpljoiZTI2OGJjMzMtYTY3My00MTNhLTkyM2UtOWQzZWFrNTBhNDFjliwidHlwZSI6ImFjY2VzcylsnN1Yil6ljcyZjMzZWE2LTNiNjgtNGM4Mi1iN2E5LTY5N2FIMzY5ZjNIMilslm5iZil6MTcyMDE1OTU4MCwiY3NyZil6ljczMmU4NzMyLWFmNTAtNGQ0NS05NWl3LWMyN2RiYTYzMmQzYSIsimV4cCl6MTcyMDE2M TM4MH0.kSnn-GKty7xzY1rRUhwXYlcbsq9WrqAWE3i6Sruo5Nc Note: Partner will send the access_token in header and API Gateway to accept and pass the same as "Authorization" header to backend
channel	Y	varchar	channel	Ex: IndMoney

Request Parameters

Field	Mandatory	Data Type	Description	Comment
Application ID	Y	Varchar 36	Unique application_id for each customer.	Ex: "58b66b6a-420c-4b80-bee5-db b5ed9aeb45"
journey_reference_no(customer_id)	N	Varchar 36	Reference number for the customers journey	Ex: "90b66b6a-420c-4b80-bee5-db b5ed9aeb45"

journey	Y	Varchar 36	Name of the type of journey	Ex: SA
---------	---	------------	-----------------------------	--------

Response Parameter

Field	Mandatory	Data Type	Description	Comment
capture_link	Y	Varchar 36	vkyc_link	Ex: "https://capture.kyc.idfy.com/captures?t=rBy68AnGONoG"
capture_expires_at	Y	Varchar 36	Link expiring date and time	Ex: "2022-11-06T06:50:18Z"
profile_id	Y	string	Unique ID for each VKYC link generated	Ex: "c297aaec-fb34-4c38-8c35-01dfe d3e96d4"
inquiry_reference_no	Y	string	Unique system-generated identifier to track the VKYC session lifecycle	Ex: "8fdee7d1-0c24-459e-b085-e0da e0a67a40"

Error Codes

BE Error Code	FE Error Code	Scenarios	Next steps
0001/20 2	-	Request exceeds max allowed limit (MAX_REQUEST)	Limit request size to allowed number of records
0002/20 2		Account number is empty	Provide a valid 4-digit account number
0003/20 2	-	Account number has non-numeric characters	Ensure account number contains only digits
0004/20 2	-	Account number is not 4 digits long	Provide exactly last 4 digits in the account number
0005/20 2	-	Partner ID is missing	Include a non-empty Partner ID
0006/20 2	-	Partner ID has special characters	Avoid using special characters in Partner ID

0007/20 2	-	Journey is missing	Provide a valid journey (e.g., "SA")
0008/20 2		Journey is not "SA"	Only "SA" is accepted as valid journey
0009/20 2	-	Journey reference number is missing	Provide a valid journey_reference_no
0010/20 2	-	return_account_product_info is missing	Use either "Y" or "N" to indicate if account info needed
0011/20 2	-	return_account_product_info is not "Y" or "N"	Must be either "Y" or "N" only
0013/20 2		Inquiry ref no or last 4 digits don't match DB record	Ensure both account and inquiry ref match DB

0014/20 2	-	No record found for given journey_reference_no	Check if customer/journey exists
0015/50 0	-	Internal error while processing one specific record	Investigate stack trace and input; fix at code/db level
500/500		General server-level error (final catch block)	check server logs

Email Generation API

Overview

If is_email_validated is "Y", the email is already validated, so we call the Factiva API directly without sending an OTP. If is_email_validated is not "Y", we send the OTP and verify it; once is complete, we then call the Factiva API.

Ex API	HDFC API
Experince Email generation <code>/api/v3/customer_otpservice/generate-email-otp</code>	Generation OTP : <code>https://10.226.163.41:5142/CC_IVR/ProxyService/PS_OTPGeneration_SMSService</code> FACTIVA_OUTPUT_URL: <code>https://api-uat.hdfcbank.com/SOAAPI/Silver/Factiva_ClosedAC/ProxyService/PS_SOAFactiva_S</code> FACTIVA_INPUT_URL: <code>https://api-uat.hdfcbank.com/SOAAPI/Silver/Factiva_ClosedAC/ProxyService/PS_SOAFactiva_S</code>

Email Verification

Overview

This document details the integration process for email verification using the Verify OTP API (api/v3/customer_otpservice/verify-email-otp). The integration involves sending an OTP to the user's email and verifying it to complete the authentication process.

Ex API	HDFC API
Experince Email Verification api/v3/customer_otpservice/verify-email-otp	Verify OTP https://10.226.163.41:5142/ETWOFAOTP/PS_ETWOF_AO_TP FACTIVA_OUTPUT_URL: https://api-uat.hdfcbank.com/SOAAPI/Silver/Factiva_ClosedAC/ProxyService/PS_SOAFactiva_S FACTIVA_INPUT_URL: https://api-uat.hdfcbank.com/SOAAPI/Silver/Factiva_ClosedAC/ProxyService/PS_SOAFactiva_S FACTIVA_STATUS_URL: https://api-uat.hdfcbank.com/SOAAPI/Silver/Factiva_ClosedAC/ProxyService/PS_SOAFactiva_S

Partner Integration Document

1. Using otp_transaction_id and OTP received through EMAIL Verify OTP API will be called.
2. Verification API will internally call the HDFC Verification API .
4. If OTP verification API is successful, then it will generate OTP. We will get otp_transaction_id in response for verification.

7. OTP will be sent to the entered email.

Header Parameters

Request Parameters

Field	Mandatory	Data Type	Description Comment
journey_reference_no	Y	Varchar 36	Journey Reference number Ex:42a6b2c0-03c5-4576-98b3-0a9c03f73897
journey	Y	Varchar	Journey Ex: SA
ip_address	N	Varchar	ip_address Ex:"110.224.117.196"
source	N	Varchar	Source Ex:Mobile/web

maker_id	N	Varchar	Maker_id Ex: hdfc8471
checker_id	N	Varchar	Checker_id Ex: hdfv3223
mis_code	N	Varchar	Mis_code Ex: 700
aadhaar_reference_number	N	Varchar	Aadhaar_reference_number Ex: 1234678 9145
marketing_details	N	Y	
lg_code	N	Y/N	Varchar Lg_code Ex: 1234678 9150
lc_code	N	Y/N	Varchar Lc_code Ex: 1234678 9151
utm_campaign	N	Y/N	Varchar Utm_campaign ex:ind_money
utm_content	N	Y/N	Varchar Utm_cont

				ent Ex: content_i ndmoney
utm_creative	N	Y/N	Varchar	Utm_crea tive Ex: content_i ndmoney
utm_medium	N	Y/N	Varchar	Utm_med ium Ex: utm_med ium
utm_source	N	Y/N	Varchar	Utm_source Ex: inmoney
utm_term	N	Y/N	Varchar	Utm_term Ex: inmoney
branch_code	N	Y/N	Varchar	Branch_code Ex: inmoney
lg_name	N	Y/N	Varchar	Lg_name Ex: inmoney
mc_id	N	Y/N	Varchar	Mc_id Ex: inmoney

icid	N	Y/N	Varchar	Icid Ex: inmoney
promo_code	N	Y/N	Varchar	Promo_code Ex: inmoney
consent_details	N	Y		
code	N	Y	Varchar	Ex: AADHAAR_BASED_A THENTICATION
value	N	Y	Varchar	Ex: Y/N/null
aml_details	N	Y		
employment_type	N	Y/N	Varchar	ex:2
organization_type	N	Y/N	Varchar	Ex:2
source_of_income	N	Y/N	Varchar	Ex:2
annual_income	N	Y/N	Varchar	Ex:2
residence_type	N	Y/N	Varchar	Ex:2
incorporation_date	N	Y/N	Varchar	Ex:2020/05/07

self_employed_since	N	Y/N	Varchar	Ex: 1980/07
self_employee_category	N	Y/N	Varchar	Ex:2
nature_of_business	N	Y/N	Varchar	Ex:2
type_of_firm	N	Y/N	Varchar	Ex:2
Customer_details	N			
communication_address	Y	N		
address1	Y	N	Varchar	Ex: "Niveus solutions"
address2	Y	N	Varchar	Ex: "Niveus solutions"
address3	N	N	Varchar	Ex: "Niveus solutions"
city_id	Y	N	Varchar	Ex:ce2c0689-b060-497 -901c-f634c9f80f92
pincode	Y	N	Varchar	Ex: 576101
permanent_address	Y	N		
city_id	Y	N	Varchar	Ex:ce2c0689-b060-497 -901c-f634c9f80f92

mandate_remarks	Y	N	Varchar	Ex:Inmoney remarks

Master Values to be used for master API

Field	Master API Request	Description
source_of_income	{"source_of_income":{"employee_code":23}}	Based on the employee type source of income will display
annual_income	{"annual_income":"Y"}	This will display all annual income dropdowns
employment_type	{"employee_type":"Y"}	This will display all employment type dropdown
residence_type	{"residence_type":"Y"}	This will display all residence-type dropdown

organization_type	{"organization_type":"Y"}	This will display all organization-type dropdown
self_employee_category	{"self_employed_professional": "Y"}	This will display all self-employee category-type dropdown
nature_of_business	{"nature_of_business": "Y"}	This will display all nature of business-type dropdown
type_of_firm	{"firm_type": "Y"}	This will display all types of firm-type dropdown
Nominee_relation_ship_id guardian_relation_ship_id	{ "relation_ship": { "journey_reference_no": "08b17b46-97fb-4d61-9a0e-4ca835880fbd", "relationship": "Y" } }	This will display all nominee_relation-type dropdown
guardian_city_id nominee_city_id nominee_state_id city_of_birth_id city_id state_id city_id	{"city":{"city_name":"udupi"}}	This will display all city-type dropdown
pincode guardian_pincode nominee_pincode	{"pincode": "576101"}	This will display all pincode-type dropdown
selected_branch_id		This will display all branch-type dropdown

selected_product_id		This will display all product-type dropdown
marital_status		This will display all marital status-type dropdown

Response Parameter

Field	Mandatory	Data Type	Description	Comment
application_id	Y	varchar(36)	application_id	Ex:58b66b6a-420c-4b80-bee5-dbb5ed9aeb45
journey_reference_no	Y	varchar(36)	journey_reference_no	Ex:58b66b6a-420c-4b80-bee5-dbb5ed9aeb45

Consent API

Overview

The Consent API facilitates experience-based consent for fixed deposits, providing authorization and traceability through unique transaction IDs, scopes for partner identification, and mandatory consent details in the request, with error handling for invalid tokens, channels, and journeys.

Ex API
Experince Consent API /api/v3/fixed_deposit/fd-consent

Header Parameters

Field	Mandatory	Data Type	Description	Comment
transactionId	Y	Varchar 40	Unique number for traceability through the flow	
scope	Y	varchar	Field to identify a partner. Will be shared during access of API. Ex: SETU

SA Creation API

Overview

This API fetches all the user data from the db and passes it to the smart account opening bank api.

Ex API	HDFC API
Experience create savings account /api/v3/fixed_deposit/create-savings-account	dosmartaccountopening https://api-uat.hdfcbank.com/OBPAPI/com.ofss.fc.cz.hdfc.obp.webservice/SmartAccountOpeningRestWrapper/doSmartAccountOpening SmartAccountOpeningInquiry https://api-uat.hdfcbank.com/OBPAPI/com.ofss.fc.cz.hdfc.obp.webservice/SmartAccountOpeningInquiry

SA Creation API Process:

Validation:

- Input parameters and headers are validated.
- A check is performed on the CRM item key.

Data Retrieval:

- Customer data required for the SA bank API is fetched from the database.

Account Creation:

- If the SA account is successfully created, the CRM API is called to generate a lead ID.

Error Handling:

- If the SA Creation API fails, an error response is sent.
- In case of a timeout with the SA bank API, the SA Enquiry API is called to verify if the account has been created.

Header Parameters

Field	Mandatory	Data Type	Description	Comment
-------	-----------	-----------	-------------	---------

channel	Y	varchar (10)	Field to identify a partner. Will be shared during access of API	Ex: SETU

ETB account opening

Overview

This api creates a new additional account to existing customer. This api is called post the Get ETB api.

Ex API	HDFC API
Experince Create ETB account <pre>/api/v3/customer_otpservice/create-etb-account</pre>	Fatca https://api-uat.hdfcbank.com/OBPAPI/com.ofs.s.fc.cz.hdfc.obp.webservice/FetchCustomerAccountAmlFatcaDetailsRestWrapper/fetchCustomerAccountAmlFatcaDetails CASAAccForExistingCust https://api-uat.hdfcbank.com/OBPAPI/com.ofs.s.fc.cz.hdfc.obp.webservice/CASAAccForExistingCustRestWrapper/doCASAAccForExistingCustomer

ETB account opening process:

Here we fetch PAN number from master_customer table based on the journey_reference_no passed in request payload.

Once customer is identified as ETB, by passing PAN and the dob of the customer we have to fetch accounts and customerid's associated using Fatca api.

Once we get associated accounts then we need to extract accounts relationship,account status,customer status,customer type and EKYC status parameters from the same.

Then we do below validations on the extracted accounts.

- Relationships of account should be one of-JOF/SOW/JOO
- Status of accounts should be other than-1,5
- Status of Customer should be-Not blocked
- Status of EKYC Compliance-KYC status as "Y" Complied
- Account types received should be CASA only
- Customer type should be -SAVING only

Once above all validations are validated for an account, then using the same account number and customer id we will invoke another bank api-doCASAAccForExistingCustomer to open a

new account for the existing customer.

In case none of the account we get from AML Fatca api does not satisfy all the validations then we give error response and terminate the journey.

Header Parameters

Field	Mandatory	Datatype	Description	Comment
channel	Y	varchar (10)	Field to identify a partner. Will be shared during access of API	Ex:SETU

Re - ekyc

Overview

In the current process, if a customer does not complete the VKYC within 72 hours of account opening (EKYC completion as per SmartX DB) or when VKYC link gets expired post account opening, there is no option for customer to reinitiate VKYC from Partner's App/Site.

In such case we fetch journey status from vkyc status inquiry, and check whether it is `vkyc_completed` or not or `Account_Approved`.

In above both cases just need to give success response.

If in case journey status is `vkyc_expired`, we need to do below validations in Initiate EKYC link api.

1. Check whether Account status is 3(`codAcctStat = 3`)
2. Check whether Product transfer is pending (`codProd = 1239`).

If above 2 conditions are satisfied, then only retrigger the Initiate EKYC link for Re-EKYC.

Here we consider Re-ekyc as a Boolean parameter, if set true then it is considered as Re-ekyc mode, if not then normal EKYC flow.

In Ekyc-Status-Inquiry api also we consider Re-ekyc as a Boolean parameter, if set true then it is considered as Re-ekyc mode, if not then normal EKYC flow. In Ekyc-Status-Inquiry api below validations are done.

1. Check whether Aadhaar reference number exists in db for given `journey_reference_number`. If exists proceed with the journey else terminate the journey.
2. Validate 100% match in Address and name of the customer.

Here we match the address and name of the customer stored in db with the address and name we get from aadhaar aux data api during Re-ekyc phase.

- If there is a 100% match then we proceed with the journey else terminate the journey.
- 3.Pan and Aadhaar name match,if there is 70% match then we proceed with the journey else terminate the journey.
 - 4.Here CRM api to be called to update the prn document.
 - 5.Then we call VKYC Initiate api to create VKYC link again.
 - 6.Journey status to be updated to RE-VKYC-Initiated else it remains Re-ekyc-Initiated
